

MySQL Install Packages — Windows

CS 410/510 Introduction to Databases · Fall 2026 · Boise State University · All links verified 1 October 2026

Packages and download URLs

PACKAGE AND DOWNLOAD URL	VERSION	SIZE
Required — install in this order · 64-bit Windows · GPLv2 except the Microsoft runtime		
Microsoft Visual C++ Redistributable — prerequisite for Workbench https://aka.ms/vs/17/release/vc_redist.x64.exe vc_redist.x64.exe · MD5 evergreen link, no fixed checksum	2015–2022	~25 MB
MySQL Community Server — the database engine https://dev.mysql.com/get/Downloads/MySQL-8.4/mysql-8.4.11-winx64.msi mysql-8.4.11-winx64.msi · MD5 b5c515a0f410cd6903cd41057ed5d662	8.4.11 LTS	129.9 MB
MySQL Workbench — SQL editor and EER modeling https://downloads.mysql.com/archives/get/p/8/file/mysql-workbench-community-8.0.47-winx64.msi mysql-workbench-community-8.0.47-winx64.msi · MD5 1078f06dcac442fbef82bc5dbd6c2046	8.0.47	255.3 MB
sakila sample database — joins, aggregation, views, M:N examples https://downloads.mysql.com/docs/sakila-db.zip	—	712 KB
world sample database — subqueries, 1:N cardinality drills https://downloads.mysql.com/docs/world-db.zip	—	90 KB
Optional · not required for any graded exercise		
menagerie sample database — first-session smoke test, two tables https://downloads.mysql.com/docs/menagerie-db.zip	—	3 KB
MySQL Workbench 26 — current line; notebooks, new Visual Explain, <i>no modeling</i> https://dev.mysql.com/downloads/workbench/ mysql-workbench-26.7.0-winx64.msi · MD5 f53e39a78460e01786eae70f67bcabd4	26.7.0	261.2 MB
Required bundle: approximately 415 MB · with both optional items: approximately 676 MB		

Why Workbench 8.0.47 and not 26.7. Oracle released Workbench 26.7 on 10 September 2026, a rebuild on MySQL Shell and Electron that obsoletes the 8.0 line. Its published feature set covers SQL editing, notebooks, Visual Explain, and administration — it does *not* yet include Database Design and Modeling. EER diagramming and reverse engineering are required by HW2 Part 2 and the integration capstone, so the course pins the final 8.0 release, still available from the MySQL archives. Workbench 8.0.47 connects to an 8.4 LTS server for SQL and reverse engineering; some administration panels may warn about the server version, and this course does not use them.

Install order and settings

1. Run vc_redist.x64.exe. Reboot only if it asks.
2. Run mysql-8.4.11-winx64.msi. MySQL Configurator launches on its own when the MSI finishes.
3. In Configurator accept **Development Computer**, port **3306**, and **Use Strong Password Encryption**. Keep **Start at System Startup** checked and the service name MySQL84. Set the root password from the Canvas setup page.
4. Run mysql-workbench-community-8.0.47-winx64.msi, launch it, and confirm the localhost:3306 connection opens.
5. Unzip each sample database and load it: `mysql -u root -p < sakila-schema.sql` then `mysql -u root -p < sakila-data.sql`.
6. Verify the install: `SELECT COUNT(*) FROM sakila.film;` returns **1000**.

Lab machines. Image CCP-243 from a prefetched bundle rather than downloading live — thirty seats each pulling 415 MB will saturate the room. Run `fetch-mysql-win.sh` to stage the folder, copy it to a USB drive or share, then run `verify-bundle.cmd` on the target machine to confirm nothing was corrupted in transit.

Reverification. Every checksum here was read from the official MySQL download pages on 1 October 2026. MySQL ships an 8.4 patch roughly quarterly; when 8.4.12 appears these filenames and checksums change together, and both this sheet and the script's package table need updating.
